# Features

## SOHO HS (High Speed Inverter)

### SOHO HS?

High-speed motors are applied to many different fields such as turbo blower, extruder, generators and etc.

SOHO HS is a high-speed application inverter which is possible to control high speed induction motors and synchronous motors with permanent magnet.

### HIGH-SPEED MOTOR CONTROL

SOHO HS is able to control high speed motors by V/F control or sensorless vector control using high-switching.

Motor's speed control range is max. 120,000rpm(0~2000Hz).

## Effective Control

- Maximized performance and energy efficiency
- Reduced harmonics of motor current
- Increased efficiency by high-performance technologies
- Easy operation and installation

## Interface

- Connecting to various devices via Profibus, Modbus, RS485, CAN
- Using Seoho Drive Manager(MMI) - monitoring & fault trace

## Improved Trouble Shooting

Saving the conditions(trace data)of current, voltage, frequency, torque And etc. for 1sec before the inverter trip occurs.

## Water & Air Cooling System

### Effective Cooling System

- Using water cooling system for efficient cooling
- Increased the safety and reliability.
